AN ECONOMIC PROFILE OF FARMS AND RANCHES IN SOUTH DAKOTA

Introduction

This publication is in response to numerous questions regarding the number of farms in different size groups within the State of South Dakota. Particular emphasis is placed upon identification of farms under economic size classifications. Data are presented by areas of the state and by counties. Areas of the state are those defined by the Crop and Livestock Reporting Service as identified in Figure 1, page 3.

Source of Data

Data has been obtained from the 1949, 1959 and 1969 Census of Agriculture. Data on the economic characteristics of farm families is not readily available and it was therefore determined that census data on farms (as distinguished from farm families) was the most useful kind of data for identification of any economic profile.

Description of Economic Classes

Much of the information in this report is based upon sales classes as identified in the Census of Agriculture. A description of these classes is as follows:

<u>Class Description</u>	<u>Value of Agricultural Products Sold</u>
Class One	\$40,000 and over
Class Two	\$20,000 to \$39,999
Class Three	\$10,000 to \$19,999
Class Four	\$5,000 to \$9,999
Class Five	\$2,500 to \$4,999
Class Six	\$50 to \$2,499

The farm operator must be under 65 years of age and worked off the farm less than 100 days during the census year.

Class Seven

Identified in the census report as "part time farms." They have a value of farm products sold of \$50 to \$2,499, the operator worked off the farm 100 days or more and is under 65 years of age.

Class Eight

Identified in the census report as "part retirement farms." They have a value of farm products sold of \$50 to \$2,499 and the operator is 65 years old or over.

Class Nine

Identified in the census report as "abnormal farms." This includes experimental farms, institutional farms, Indian reservations, and those farms operated by hospitals, schools, grazing associations, government agencies, etc.
